SUMMARY

Computer Science graduate (Summa Cum Laude) with hands-on experience building AI-assisted web applications using React.js, FastAPI, and PostgreSQL. Developed and tested an AI-assisted learning management system featuring automated assessment and intelligent content generation, with a focus on modular architecture and scalability-ready design. Demonstrates strong full-stack development and API design skills, with experience validating systems through user testing. Fast learner with a track record of building practical, user-validated solutions, including an AI-assisted LMS tested by students, professors, administrators, and IT staff.

EDUCATION

Laguna College of Business and Arts

Graduated April 2026

Bachelor of Science in Computer Science

Summa Cum Laude

Relevant Coursework: Software Engineering; Mobile App Development; Web Development; Intelligent Systems (AI); Data Structures and Algorithm; Object-Oriented Programming;

Calamba City Science Integrated School

Graduated 2022

Honor 2017-2022

EXPERIENCE

Freelance Web Developer

April 2026 - Present

- Developed a TikTok affiliate marketing website using Next.js, designed to attract brand partnerships and showcase creator performance
- Built a responsive, conversion-focused UI with optimized routing and page structure for improved user experience
- Structured key sections including performance metrics, case studies, and service offerings to support brand acquisition

PROJECTS

AIDUKADO: AI-Assisted Learning Management System for Laguna College and Business and Arts (React.js, FastApi, Tailwind, PostgreSql)

- Developed an AI-assisted learning management system featuring automated content summarization for students and AI-assisted assessment tools for teachers.
- Implemented intelligent exam generation that combines multiple lessons and enables automatic checking of student responses, reducing manual grading time.
- Built a responsive and user-friendly interface using ReactJS and Tailwind CSS to enhance accessibility and user experience.
- Designed RESTful APIs with FastAPI to handle authentication, course management, and AI-driven functionalities.
- Managed structured data using PostgreSQL and integrated Cloudflare R2 for scalable file storage, enabling efficient handling of academic records, assessments, and user uploads.

TRAVELAI: AI Integrated Travel Companion Web App (React.js, Express.js, Tailwind, MongoDB)

- Developed a mobile-responsive web application that provides AI-powered travel recommendations based on user-searched locations
- Implemented features allowing users to explore tourist spots with detailed information including nearby restaurants, activities, and estimated costs
- Integrated interactive maps to display locations of selected destinations, improving user navigation and planning experience
- Built a bookmarking system enabling users to save and manage preferred tourist spots for future reference
- Designed and developed RESTful APIs using Express.js and managed data with MongoDB for efficient storage and retrieval of travel data

SKILLS

Languages

- Python, Javascript, C#

Frontend

- React.js, Bootstrap, Tailwind, CSS, HTML, Zustand, Next.js

Backend

- Express.js, FastApi

Database

- PostgreSQL, MySQL, MongoDB

Tools and Technologies

- Git, Github, Figma
- Cloud Services: Cloudflare R2
- AI Integration: Gemini API, GROQ API

AWARDS AND CERTIFICATES

National Certificate II

Service Awardee

- Computer Science Vice President - Department of Engineering and Computer Studies (2025 - 2026)
- 3rd Year CS Representative - Department of Engineering and Computer Studies (2024 - 2025)

Best Research Awardee

Special Academic Citation Awardee
